Visible items and facings

Review

Item report

Teams need to understand what is happening across stores

To better manage inventory, brand presentation and sales.

Before the visit

After the visit

**What is present?
How many facings?
What changed?**

Efficient capture and analysis,
automated as much as possible.

The technical challenge starts with
complete, readable shelf images.

Original field examples supplied with the project

AI Shop Through the 12-Step SDLC2 Lifecycle

A working application and a practical architecture case study

AI Shop demonstrates the application and the evidence used to evaluate its architecture.
